## Abstract

This module explains how to set the notation and print parameters of a collection.

Modules in different collections may use different ways of presenting the same items, such as vectors and imaginary numbers. You can select the presentation of these items in your collection with the display parameters. You can also set some parameters related to the printing of your book, such as typeface selection. To set these parameters for your collection, use the following steps:

- 1. Click the "Parameters" tab in the Collection Composer.
- 2. Select the radio buttons for the desired notations. The defaults appear in the first column.
- 3. Click the "Update Properties" button.
